

AIR EXTRACTION RANGE

Say no to insects and yes to the environment with the Mo-el Insectivoro and Turbine insect killers from Pureheat. Safe for the environment and harmless to people, Insectivoro and Turbine combine high-output UV-A lamps with an extraction fan. Insects are attracted to the light, extracted from the air by fan technology and trapped in a collection tray or bag. Once inside, the insect cannot escape and dies of dehydration. There is no smell and no chemicals. The Insectivoro patented collection tray door opens and closes automatically in synchronisation with the on/off switching of the fan.

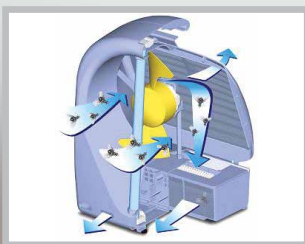

Insectivoro Model No. 367G

Manufactured with your family's safety foremost, the Insectivoro construction features are:

- Soft, plastic fan is totally safe if touched by children.
