ELECTRIC PANEL HEATERS

ELECTRIC PANEL HEATERS

Pureheat panel heaters are so unobtrusive when installed, so silent when operating and so insignificant on your electricity bill you'll be asking yourself - "What Heater?" after installation.

The Pureheat panel heater is a convection heater that bases its operation on one simple law of physics - hot air rises. Just like a hot air balloon rises when heated and descends when cool, heat generated by the high efficiency electric element causes the air to rise in your room, heating the room as it rises and dropping as it cools, returning back through the heater to be heated again - it's that simple!

All Pureheat panel heaters cycle thermostatically from on to off to maintain the set room temperature. If sized right for the room, the heater may only need to be operating 50% of the time.

Pureheat panel heaters are ideal for all rooms where silent, gentle warm air is essential - particularly for sufferers of hayfever, asthma and other dust-born allergies.

Sizes: Available in four different heat outputs. All heaters are the same height and depth off the wall, with the length varying depending on the wattage of the heater.

Design: Latest "Bevel-edge" design with robust powder-coated steel body.

Controls: Thermostat only and Thermostat c/w Timer models available
Easy to use rotating thermostat +/- 0.5 deg C.
Half heat option (except for PH075 & PH075T)

Mounting: Wall mount - brackets supplied
Portable - feet & castors supplied

Safety: Auto-reset thermal cut-out
IP24 Splash-proof rating
Frost protection
Child-proof switch protection cover
No moving parts

Warranty: 3 year, "No Fuss", full replacement warranty.
