

Pureheat Fiore Heats New Melbourne Japanese Restaurant.

Toshi Maeda of Maedaya Sake and Grill Restaurant found the perfect solution for heating an upstairs section in his Richmond, Victoria venue with Pureheat's Fiore 1800w outdoor electric heater.

The project required smaller electric heater units to fit above the tables and between the existing stainless steel flues, as there was limited space and no airconditioning. Pureheat provided the design and product support, recommending the Fiore outdoor electric heaters and an installation contractor.

The lightweight aluminium housing of the radiant heater blends with the existing exhaust flues to offer a consistent visual appeal while providing excellent heating of the restaurant area.

Pureheat's Fiore and Girosole range of outdoor electric heaters are IP65 water-proof rated making them suitable for use in many arduous indoor applications and most outdoor exposed environments, especially hospitality venues.

The Fiore is available in 1200watt and 1800watt, while the Girosole outdoor heater is available in a 3 x 1200 watt pendant or pole mounting.
