

Pureheat Panel Heaters are so unobtrusive when installed, so silent when operating and so unnoticeable on your electricity bill you'll be asking yourself - "what heater?" after installation.

Pureheat Panel Heaters rely on the natural law of physics - hot air rises. Just like a hot air balloon rises when heated and descends when cool, heat generated by the high efficiency electric element in the Pureheat Panel Heater causes the air to rise into your room, heating it as it goes and circulating it back through the heater for more of the same - it's that simple.

Pureheat Panel Heaters are ideal for all rooms where silent, gentle warm air is essential - particularly for sufferers of hayfever, asthma and other dust born allergies.

Sizes: Pureheat Panel Heaters are available in four different heat outputs, all the same height and depth off the wall, with the length varying depending on the heat required.

Design: Latest "Bevel-edge" design with robust powder-coated steel body.

Controls: Manual & fully programmable timer models available.
Easy to use rotating thermostat +/-0.5 Deg C.
Simple rocker switching.
Half heat option (except on PH075 & PH075T)

Safety: Auto-reset thermal cutout
IP24 Splash proofing.
Frost protection
Child proof, switch protection cover.
No moving parts.

Models Available:
